

## LIQUID CHILLERS *P*ANEL SERIES

. . . for vertical attachment

---

Our most recent *P* series currently offers water chillers with a cooling capacity of up to 4.5 kW. The units are designed with a very flat structure as wall-mounted units and are ideal if space for stand-alone units is not available.

PW 1800 . . . PW 4500

### Characteristics of the standard design:

#### DESIGN

- Very flat structure with shallow depth
- With steam jet washable air inlet filter grid
- Optimum accessibility to electric box and components for maintenance
- Cooling water tank is easy to remove from the unit for maintenance/cleaning

#### COMPONENTS

- Air-cooled refrigeration unit with fully hermetic compressor, air outlet at the top
  - CFC-free coolant R404A
  - Closed, unpressurized cooling water tank made of stainless steel
  - High performing immersible pump
  - Electronic PID temperature controller with digital display
  - Display of warnings/faults using signal lamps and potential-free contacts
-
