

LIQUID CHILLERS *WASSERKÜHLER* SERIES

. . . for cooling water

The **WK** series is our original range and, since 1997, has met the needs of economic and tried and tested water chillers for the machine industry. The standard designs with a cooling capacity of up to 6.5 kW offer several possibilities for individual requirements and options.

Characteristics of the standard design:

KONSTRUKTION

- Functional, maintenance-friendly structure
- Replaceable/washable air inlet filter mat
- Optimum accessibility to electric box and components for maintenance
- Cooling water tank is easy to open for maintenance/cleaning
- High mobility through rollers (2x steerable, 2x fixed)

KOMPONENTEN

- Air-cooled refrigeration unit with fully hermetic compressor, air outlet at the rear
- CFC-free coolant R404A
- Closed, unpressurized cooling water tank made of stainless steel
- High performing immersible pump
- Electronic PID temperature controller with digital display
- Display of warnings/faults using signal lamps and potential-free contacts
